Chelonia mydas

Cyprus Bee Orchid
Ophrys kotschy

Trochoidea carinatoglobosa

Neptune Grass
Posidonia oceanica

Mediterranean Killifish
Aphanius fasciatus

Mediterranean monk seal
Monachus monachus

More information

This mini guide presents a small number of the flagship species that are often found in Cyprus, and especially in the Akrotiri Peninsula.

- Flagship species are charismatic species used to represent a habitat, they serve as a symbol to raise environmental consciousness.
- By conserving and protecting the habitats of the flagship species many others species that share these habitats will also benefit, so they bring wider conservation benefits.

Scan for more information of each species
